The Board of Trustees
Arkansas State Police Retirement System
Little Rock, Arkansas

Ladies and Gentlemen:

The results of the *Annual Actuarial Valuation of the Arkansas State Police Retirement System as of June 30, 2013, and the Gain/Loss Analysis of Experience among Active Members from July 1, 2012 to June 30, 2013* are presented in this report. The valuation was based upon Retirement System provisions in effect on the valuation date. The purpose of the valuation and gain/loss analysis is to measure funding progress in relation to the actuarial cost method, to determine the employer contribution rate and to determine actuarial information for Governmental Accounting Standards Board (GASB) Statement No. 25 and No. 27. The results of the valuation may not be applicable for other purposes.

This report should not be relied on for any purpose other than those described above. It was prepared at the request of the Board and is intended for use by the Retirement System and those designated or approved by the Board. This report may be provided to parties other than the System only in its entirety and only with the permission of the Board.

The signing actuaries are independent of the plan sponsor.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. Due to the limited scope of the actuary's assignment, the actuary did not perform an analysis of the potential range of such future measurements.

The cooperation of the administrative staff in furnishing the materials required for this valuation is hereby acknowledged with appreciation. The actuarial methods and assumptions used in the valuation are summarized in Section D of this report. The assumptions are established by the Retirement Board after consulting with the actuary. The actuarial assumptions used for the valuation produce results which, individually and in the aggregate, are reasonable.

This report has been prepared by actuaries who have substantial experience valuing public employee retirement systems. To the best of our knowledge, this report is complete and accurate and was made in accordance with standards of practice promulgated by the Actuarial Standards Board.

Board of Trustees

OBJECTIVES AND STATUS

General Financial Objective. Section 24-2-701 of the Arkansas Code provides as follows:

“6.01. (a) The general financial objective of each Arkansas public employee retirement plan shall be to ***establish and receive contributions which, expressed as percents of active member payroll, will remain approximately level from generation to generation of Arkansas citizens.*** More specifically, contributions received each year shall be sufficient both (i) to fully cover the costs of benefit commitments being made to members for their service being rendered in such year and (ii) to make a level payment which if paid annually over a reasonable period of future years will fully cover the unfunded costs of benefit commitments for service previously rendered.....”

Benefit Changes. The most recent benefit changes were reflected in the June 30, 2009 valuation. No benefit changes have been adopted for consideration in the June 30, 2013 valuation.

Assumption Changes. Demographic and economic assumptions were last updated in the June 30, 2013 valuation.

Method Changes. The actuarial cost method and amortization method were updated for the June 30, 2013 valuation in conjunction with the recently completed experience study.

ASPRS Status. Based upon the results of the June 30, 2013 actuarial valuation, ***ASPRS continues to satisfy the general financial objective*** of level contribution financing.

ASPRS Reserve Strength. As a by-product of achieving level contribution financing, actuarial accrued liabilities usually become more and more funded over a period of years. Funded ratios in the 70% to 80% range are common in public sector retirement plans. **The funded ratio of ASPRS** has been adversely affected by the market downturn in late 2008 and early 2009 (as has virtually all other public employee retirement systems in the country). On a funding value of assets basis, the System has a 65% funded ratio. On a market value of assets basis, the System has a 65% funded ratio.

Employer Contribution Rates. Based upon experience through June 30, 2013, the State Police contribution rate will be 47.93% of covered payroll for the fiscal year beginning July 1, 2013.

SECTION A
VALUATION RESULTS

**COMPUTED ACTUARIAL ACCRUED LIABILITIES
AS OF JUNE 30, 2013**

Actuarial Present Value of	(1) Total Present Value	(2) Portion Covered By Future Normal Cost Contributions	(3) Actuarial Accrued Liabilities (1) - (2)
Future benefits to be paid to current retirees, beneficiaries, future beneficiaries of current retirees, and current DROP members (not including DROP reserve)	\$272,133,618	\$ 3,299,818	\$268,833,800
Age and service benefits based on service likely to be rendered by present active members (including DROP reserve)	125,330,537	39,167,447	86,163,090
Separation benefits likely to be paid present active and inactive members	7,786,509	4,711,901	3,074,608
Disability benefits likely to be paid present active members	6,486,224	4,030,766	2,455,458
Death-in-service benefits likely to be paid on behalf of present active members	1,581,978	649,622	932,356
Total	\$413,318,866	\$51,859,554	\$361,459,312
Valuation assets			233,152,854

After legislated changes in benefit provisions.

& Beginning in 1996, rate is based on active member payroll including DROP participants.

@ After changes in actuarial assumptions and/or methods.

“Employer contributions” are the total of all types of revenue to the System except employee contributions by payroll deduction and investment return. “Employer contributions” include such revenues as court fines and other transfers.

SHORT CONDITION TEST – 10-YEAR COMPARATIVE STATEMENT

The Arkansas SPRS funding objective is to meet long-term benefit promises through contributions that remain approximately level from year-to-year as a percent of member payroll. If the contributions to the System are level in concept and soundly executed, the System will *pay all promised benefits when due -- the ultimate test of financial soundness*. Testing for level contribution rates is the long-term test.

A short condition test is one means of checking a System's progress under its funding program. In a short condition test, the plan's valuation assets (cash and investments) are compared with:

- 1) Member accumulated contributions;
- 2) The liabilities for future benefits to present retired lives;
- 3) The employer financed portion of liabilities for service already rendered by non-retired members.

In a System that has been following the discipline of level percent-of-payroll financing, active member contributions (liability 1) and the liabilities for future benefits to present retired lives (liability 2) will be fully covered by valuation assets (except in rare circumstances). In addition, the liabilities for service already rendered by active members (liability 3) will be partially covered by the remainder of valuation assets. The larger the funded portion of liability 3, the stronger the condition of the System.

Valuation Date June 30	Entry Age Accrued Liability			Valuation Assets	Portion of Present Values Covered By Valuation Assets			
	(1) Active Members Contr.	(2) Retirees and Benef.	(3) Active Member (Employer Financed Portion)		(1)	(2)	(3)	Total

After legislated changes in benefit provisions.

@ After changes in actuarial assumptions and/or methods.

COMMENTS

Experience

Experience was favorable this year; specifically investment return (measured on a funding value basis). As a result, the funded status increased to 65% (see page A-5). On a market value basis, the funded status is 65% (up from 59% last year). As of June 30, 2013, unrecognized cumulative investment gains totaling \$3.1 million remain to be recognized in the next three years (see page B-14). If there are no new losses to offset scheduled investment recognition during this coming period and based upon a 26-year open amortization period, the employer contribution rate would be expected to decrease by approximately 0.7% of payroll from the current level.

Annual Reserve Transfers

Each year reserve transfers are recommended so that there will be 100% funding in the Retirement Reserve Account and the Deferred Annuity Account. The Retirement Reserve Account is responsible for future annuity payments to present retired lives. The Deferred Annuity Account is responsible for future annuity payments to present inactive members.

This year's transfer amounts are given below:

Employer Accum. Account Before Transfers	Transfers as of July 1, 2013 (from) to:		Employer Accum. Account After Transfers
	Deferred Annuity Account	Retirement Reserve Account	
\$10,918,539	\$449,576	\$14,164,026	\$(3,695,063)

Conclusion

The computed employer contribution rate to satisfy the statutory funding requirements set forth in Section 24-6-209 of the Arkansas Code (see page G-1) is 47.93% of covered payroll for the year beginning July 1, 2013.

SECTION B
VALUATION DATA

SUMMARY OF NON-CONTRIBUTORY BENEFIT PROVISIONS (LAST CHANGED AS OF 7-1-2009)

The Non-Contributory Plan was created by Act 793 of 1977 and was effective January 1, 1978. All non-retired members are now covered by non-contributory benefits. Act 1071 of 1997 created a Tier Two benefit plan for all officers hired on or after April 3, 1997. Existing members of the plan in effect prior to this date (Tier One) had one year to elect coverage under Tier Two.

VOLUNTARY RETIREMENT

With a full benefit, after 30 years of actual service, regardless of age, or at age 65 with 5 actual years of service for Tier One and Tier Two. The age requirement is reduced by 1 month for every 2 months of Public Safety service credit, but not below age 52 for Tier One or age 55 for Tier Two members.

Public Safety service credit is granted at the rate of 1.5 months of credit for each month of actual Public Safety employment for Tier One. Service is credited at a rate of one for one in Tier Two.

With a reduced benefit, once a member's age is within 10 years of becoming eligible for full benefits. The reduction for Tier One is equal to 1/2 of 1% for each month retirement precedes Normal Retirement Age. The reduction for Tier Two is equal to 3/4 of 1% for each month retirement precedes Normal Retirement Age.

FINAL AVERAGE PAY (FAP)

Average of the highest 60 calendar months' pays for Tier One or 48 calendar months for Tier Two.

FULL AGE & SERVICE RETIREMENT BENEFIT

Tier One: 1.55% of FAP times years and months of credited service. Tier Two: 2.475% of FAP times credited service. If retirement is prior to age 62, an additional .322% of FAP times credited service will be paid until the retiree attains age 62 for Tier One or .513% of FAP times credited service for Tier Two.

Public Safety service credit is granted at the rate of 1.5 months of credit for each month of actual Public Safety employment for Tier One. Service is credited at a rate of one for one in Tier Two.

For Tier One, the portion of the SPRS benefit based on service before 1978 cannot be less than the amount provided by contributory provisions in effect at time of retirement; and if there is credited service for time prior to July 1, 1991, the benefit cannot be less than under the provisions in effect July 1, 1990, (using Social Security offset), plus increases granted since that date.

For Tier One, the minimum monthly benefit is \$150 minus any age and beneficiary option reductions.

VESTED AND REDUCED EARLY RETIREMENT BENEFITS

5 years of actual service, and leaving System-covered employment before full retirement age.

Deferred full retirement benefit, based on service and pay at termination, begins when full retirement age would have been reached by continuing covered employment.

In place of a deferred full benefit, a qualifying member may elect an immediate reduced benefit, provided the member is within 10 years of full retirement age. The reduced amount is the full amount reduced by 1/2 of 1% for Tier One and/or 3/4 of 1% for Tier Two for each month of difference in benefit commencement ages.

DEATH WHILE IN SYSTEM COVERED EMPLOYMENT

Member's accumulated contributions before 1978 are refundable.

If the deceased member has 5 or more years of service and has qualifying dependents, monthly benefits are payable instead. A surviving spouse receives a benefit as if the member had retired and elected the joint & 75% survivor option. Payment begins immediately if the member was eligible for a full age and service benefit or had 20 years of service; or payment begins at the spouse's age 50 if the member had 15 or more years of service; or payment begins at the spouse's age 62 if the member had less than 15 years of service.

If a member is killed while in the official line of duty and the surviving spouse is eligible for a deferred benefit, then the surviving spouse may elect to receive a reduced benefit immediately. The reduction of the benefit shall be 1/2 of 1% per month for each of the first 60 months that the benefit commences before when it would have otherwise commenced, plus; 1/4 of 1% per month for each month more than 60 months that the benefit commences before when it would have otherwise commenced. However, the total reduction shall not be more than 50%.

Each dependent child receives a benefit of 10% of annual pay (maximum of 25% of annual pay for all children).

Dependent parents' benefits are payable if neither spouse nor children's benefits are payable.

TOTAL AND PERMANENT DISABILITY

Tier One eligibility: Disabled after 5 years of service.

Tier Two eligibility: Disabled after 5 years of service.

Amount is computed as an age and service benefit, based on service and pay to the time of disability.

DEATH AFTER RETIREMENT

Retiring member can provide protection for a beneficiary by electing an option which provides beneficiary protection by reducing the retired employee's benefit amount.

Under Tier One, if a straight life annuity is paid, upon the retiree's death, 50% of the retiree's benefit is continued to a surviving spouse. If the deceased retiree leaves children under age 18, 75% of the retiree's benefit is continued to the surviving spouse. If there is no surviving spouse, the 75% will be divided among the children under age 18.

Under Tier Two, if a straight life annuity is elected, no survivor benefit is payable.

BENEFIT INCREASES AFTER RETIREMENT

Annually, there is a cost-of-living adjustment equal to 3% of the current benefit amount.

MEMBER CONTRIBUTIONS

None.

**ARKANSAS STATE POLICE OFFICERS DEFERRED RETIREMENT OPTION PLAN – TIER I
(Act 967 of 1995)**

Tier One members with 30 years of credited service and who are eligible to receive a service retirement pension may participate.

Participating members may continue in employment for up to 7 years and have their accrued monthly benefit (at date of participation) credited to an individual account in the Deferred Retirement Option Plan in lieu of any further benefit accruals.

The Deferred Retirement Option Plan accounts accumulate with interest and are paid to the member at termination of active membership in either a lump sum or as an annuity of equivalent value. Interest is credited annually at a rate established by the Board of Trustees.

**ARKANSAS STATE POLICE OFFICERS DEFERRED RETIREMENT OPTION PLAN – TIER II
(Act 1242 of 2009)**

Tier Two members with at least 30 years of actual service and are eligible to receive a service retirement pension may participate.

Participating members may continue in employment for up to 7 years and have seventy-two percent (72%) of their accrued monthly benefit (at date of participation) credited to an individual account in the Deferred Retirement Option Plan in lieu of any further benefit accruals.

The Deferred Retirement Option Plan accounts accumulate with interest and are paid to the member at termination of active membership in either a lump sum or as an annuity of equivalent value. Interest is credited annually to participant accounts at a rate established by the Arkansas State Police Retirement System Board of Trustees that shall not be greater than five percent (5%) nor less than one percent (1%) per annum.

DEVELOPMENT OF PRESENT POPULATION JUNE 30, 2013

Expected Terminations from Active Employment for Current Active Members

The chart shows the expected future development of the present population in simplified terms. The Retirement System presently covers 464 active members (not in the DROP). Eventually, 3% of the population is expected to terminate covered employment prior to retirement and forfeit eligibility for a monthly benefit. 90% of the present population is expected to receive monthly retirement benefits either by retiring directly from active service, or by separating from service without withdrawing contributions. 7% of the present population is expected to become eligible for death-in-service or disability benefits.

H. Difference Between Market & Funding Values	15,870,903	(3,860,282)	3,117,581			
I. Recognized Rate of Return	2.1%	4.3%	10.5%			
J. Market Value Rate of Return	25.9%	(4.8%)	14.1%			
K. Ratio of Funding Value to Market Value	92.9%	101.8%	98.7%			

The Funding Value of Assets recognizes assumed investment return (line E3) fully each year. Differences between actual and assumed investment return (line E4) are phased-in over a closed 4-year period. During periods when investment performance exceeds the assumed rate, Funding Value of Assets will tend to be less than market value. During periods when investment performance is less than the assumed rate, Funding Value of Assets will tend to be greater than market value. If assumed rates are exactly realized for 3 consecutive years, funding value will become equal to market value.

COMPARISON OF RATES OF RETURN

COMPARISON OF ASSET VALUES

SECTION C

RESULTS OF GAIN/LOSS ANALYSIS

COMMENTS

Purpose of Gain/Loss Analysis. Regular actuarial valuations provide information about the composite change in unfunded actuarial accrued liabilities -- whether or not the liabilities are increasing or decreasing and by how much. However, valuations do not show the portion of the change attributable to each risk area within the retirement system financial mechanism: the rate of investment return which plan assets earn; the rates of withdrawal of active members who leave covered employment; the rates of mortality; the rates of disability; the rates of pay increases; and the ages at actual retirement. In an actuarial valuation, assumptions are made as to what these rates will be, for the next year and for decades in the future.

The objective of a gain and loss analysis is to determine the portion of the change in unfunded actuarial accrued liabilities that is attributable to each risk area.

The fact that actual experience differs from assumed experience is to be expected -- *the future cannot be predicted with precision.* The economic risk areas (particularly investment return and pay increases) are volatile.

Changes in actuarial assumptions for a risk area should be made when the differences between assumed and actual experience have been observed to be sizable and persistent. A gain and loss analysis covering a relatively short period may or may not be indicative of *long-term trends, which are the basis of financial assumptions.*

The Arkansas State Police Retirement System had a net experience gain of \$8.7 million during the 2012-2013 observation year. Recognized investment return above the assumed rate produced a gain of \$5.4 million. Further details are shown on pages C-2 to C-6.

DERIVATION OF EXPERIENCE GAIN/LOSS
YEAR ENDED JUNE 30, 2013
(IN \$1,000'S)

Actual experience will not (except by coincidence) coincide exactly with assumed experience. Gains and losses often cancel each other over a period of years, but sizable year-to-year fluctuations are common. Detail on the derivation of the experience gain/loss is shown below.

(1) UAAL * at start of year	\$ 140,292
(2) Normal cost from last valuation	5,759
(3) Employer contributions	19,473
(4) Interest accrual: $(1) \times 0.08 + ((2) - (3)) \times 0.04$	10,675
(5) Expected UAAL before changes: $(1) + (2) - (3) + (4)$	137,253
(6) Change for revised actuarial assumptions and/or valuation methods	(278)
(7) Change from benefit changes	0
(8) Expected UAAL after changes: $(5) + (6) + (7)$	136,975
(9) Actual UAAL at end of year	128,306
(10) Gain/loss: $(8) - (9)$	\$ 8,668
<hr/>	
(11) Gain/loss as percent of actuarial accrued liabilities at start of year	2.4%

* *Unfunded actuarial accrued liability.*

**GAINS & LOSSES BY RISK AREA
DURING THE PERIOD JULY 1, 2012 TO JUNE 30, 2013**

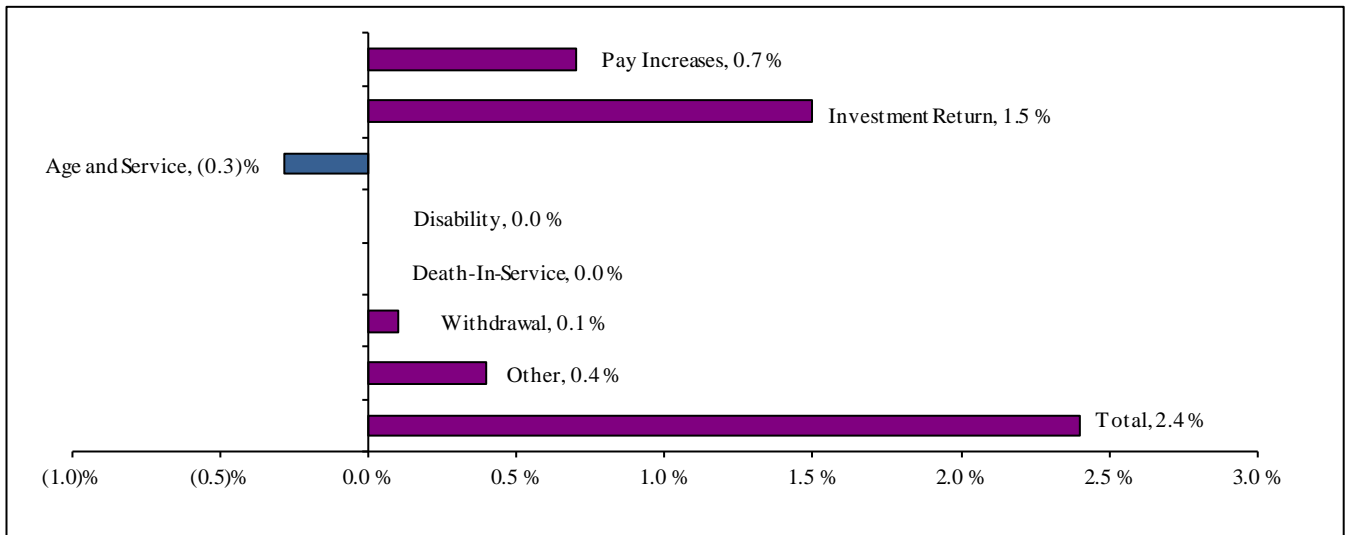

Type of Risk Area	Gain/Loss in Period	
	\$ Millions	Percent of Liabilities
ECONOMIC RISK AREAS		
<i>Pay Increases.</i> If there are smaller pay increases than assumed, there is a gain. If greater increases, a loss.	\$ 2.6	0.7 %
<i>Investment Return.</i> If there is greater recognized investment return than assumed, there is a gain. If less return, a loss.	5.4	1.5 %
NON-ECONOMIC RISK AREAS		
<i>Age & Service Retirements.</i> If members retire at older ages or with lower final average pays than assumed, there is a gain. If younger ages or higher average pays, a loss.	(1.0)	(0.3)%
<i>Disability Retirements.</i> If there are fewer disabilities than assumed, there is a gain. If more, a loss.	0.0	0.0 %
<i>Death-in-Service Benefits.</i> If there are fewer claims than assumed, there is a gain. If more, a loss.	0.0	0.0 %
<i>Withdrawal.</i> If more liabilities are released by other separations than assumed, there is a gain. If smaller releases, a loss.	0.4	0.1 %
Actuarial Gain/Loss	\$7.4	2.0 %
<i>Other.</i> Gains and losses resulting from group size change, data adjustments, timing of financial transactions, and retiree mortality.	1.3	0.4 %

SECTION D

ACTUARIAL METHODS AND ASSUMPTIONS

**SUMMARY OF ACTUARIAL ASSUMPTIONS
USED FOR STATE POLICE ACTUARIAL VALUATIONS
ASSUMPTIONS ADOPTED BY BOARD OF TRUSTEES AFTER
CONSULTING WITH ACTUARY**

Economic Assumptions

The investment return rate used in making the valuation was 8.00% per year, compounded annually (net after administrative and investment expenses). The assumed real rate of return is the portion of investment return which is more than the wage inflation rate. Considering assumed wage inflation of 4.00%, the 8.00% investment return rate translates to an effective assumed real rate of return of 4.00%. The wage inflation assumption was revised for the June 30, 2007 valuation and the investment assumption was revised for the June 30, 2009 valuation.

Pay increase assumptions for individual active members are shown on page D-5. Part of the assumption for each age is for a merit and/or seniority increase, and the other 4.00% recognizes wage inflation. This includes a component for price inflation of 3.00% and a component for real wage growth at 1.00%. The pay increase assumption for individual active members was revised for the June 30, 2013 valuation.

Total active member payroll is assumed to increase 4.00% a year, which is the portion of the individual pay increase assumptions recognizing wage inflation.

The number of active members is assumed to continue at the present number.

Non-Economic Assumptions

The mortality tables used to measure retired life mortality were the RP-2000 Combined Healthy mortality table, Projected to 2020 using Projection Scale BB, set-forward 2 years for males and 1 year for females. Related values are shown on page D-3. Disability post-retirement mortality was assumed to be the same as standard post-retirement mortality set forward an additional 10 years. Based upon the experience observed during the most recent experience study, it appears that the current table provides for an approximate 14% margin for future mortality improvement. Pre-retirement mortality rates are assumed to be 50% of post-retirement mortality rates. The mortality assumption was revised for the June 30, 2013 valuation.

The probabilities of retirement for members eligible to retire are shown on page D-4. The assumption was revised for the June 30, 2013 valuation.

The probabilities of death-in-service, disability and withdrawal from service are shown for sample ages on page D-5. The assumption for death-in-service was revised for the June 30, 2013 valuation.

The individual entry-age normal actuarial cost method of the valuation was used in determining liabilities and normal cost.

Differences in the past between assumed experience and actual experience (“actuarial gains and losses”) become part of actuarial accrued liabilities.

Unfunded actuarial accrued liabilities are amortized to produce contribution amounts (principal & interest) which are level percent-of-payroll contributions.

Present assets (cash & investments) were valued on a market related basis in which differences between actual and assumed returns are phased-in over a four year period.

The data about persons now covered and about present assets was furnished by the System’s administrative staff. Although examined for general reasonableness, the data was not audited by the Actuary.

The actuarial valuation computations were made by or under the supervision of a Member of the American Academy of Actuaries (MAAA).

65	100%	100%		

A member is assumed to be eligible to retire at age 52 (55 for Tier Two) with 17 years of service, or at any age with 30 years of service (Tier Two). A member is assumed to be eligible to retire early at age 47 (50 for Tier 2) with 17 years of service. For a Tier 2 member with 30 or more years of service at the beginning of a year, the percents shown for service based retirement (30 or more years) take precedence over the percents associated with age based retirement.

It was assumed that members eligible to enter the DROP will do so to maximize the value of their benefits.

MISCELLANEOUS AND TECHNICAL ASSUMPTIONS

JUNE 30, 2013

Marriage Assumption:	95% of males and 95% of females are assumed to be married for purposes of death-in-service benefits. 90% of males and 90% of females are assumed to be married for purposes of death-after-retirement benefits. Male spouses are assumed to be three years older than female spouses for active member valuation purposes.
Pay Increase Timing:	Beginning of year. This is equivalent to assuming that reported pays represent amounts paid to members during the year ended on the valuation date.
Decrement Timing:	Decrements are assumed to occur mid-year.
Eligibility Testing:	Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.
Decrement Relativity:	Decrement rates are used directly from the experience study, without adjustment for multiple decrement table effects.
Decrement Operation:	Disability and withdrawal decrements do not operate during the period a member is assumed to be eligible for an unreduced benefit.
DROP Participants:	For members participating in the DROP, reported payroll is multiplied by 3.7 to estimate present value of future salaries. Payroll data was provided for the month of June 2013.
Incidence of Contributions:	Contributions are assumed to be received continuously throughout the year.
Benefit Service:	Exact fractional service is used to determine the amount of benefit payable.
Tier One DROP Interest Credit:	Interest is assumed to be credited at 3.25%.
Tier Two DROP Interest Credit:	Interest is assumed to be credited at 3.25%.
Other Liability Adjustments:	Active member non-refund normal costs and actuarial accrued liabilities were increased by 1.5% to reflect non-reported reciprocal service.

SECTION E
FINANCIAL PRINCIPLES

FINANCIAL PRINCIPLES AND OPERATIONAL TECHNIQUES OF ASPRS

Promises Made, and Eventually Paid. As each year is completed, ASPRS in effect hands an “IOU” to each member then acquiring a year of service credit --- the “IOU” says: “The Arkansas State Police Retirement System owes you one year’s worth of retirement benefits, payments in cash commencing when you qualify for retirement.”

The related *key financial questions* are:

Which generation of taxpayers contributes the money to cover the IOU?

The present taxpayers, who receive the benefit of the member’s present year of service?

Or the future taxpayers, who happen to be in Arkansas at the time the IOU becomes a cash demand?

The law governing ASPRS financing intends that this year’s taxpayers contribute the money to cover the IOUs being handed out this year. By following this principle, funds will be accumulated during members’ periods of active participation which, when combined with investment income, are expected to be sufficient to pay promised benefits throughout the years of retirement.

An inevitable by-product of the level-cost design is the accumulation of reserve assets, for decades, and the income produced when the assets are invested. ***Investment income*** becomes ***the third and largest contributor*** for benefits to employees, and is interlocked with the contribution amounts required from members and employers.

Translated to actuarial terminology, this level-cost objective means that the contribution rates must total at least the following:

Normal Cost (the cost of members' service being rendered this year)

... plus ...

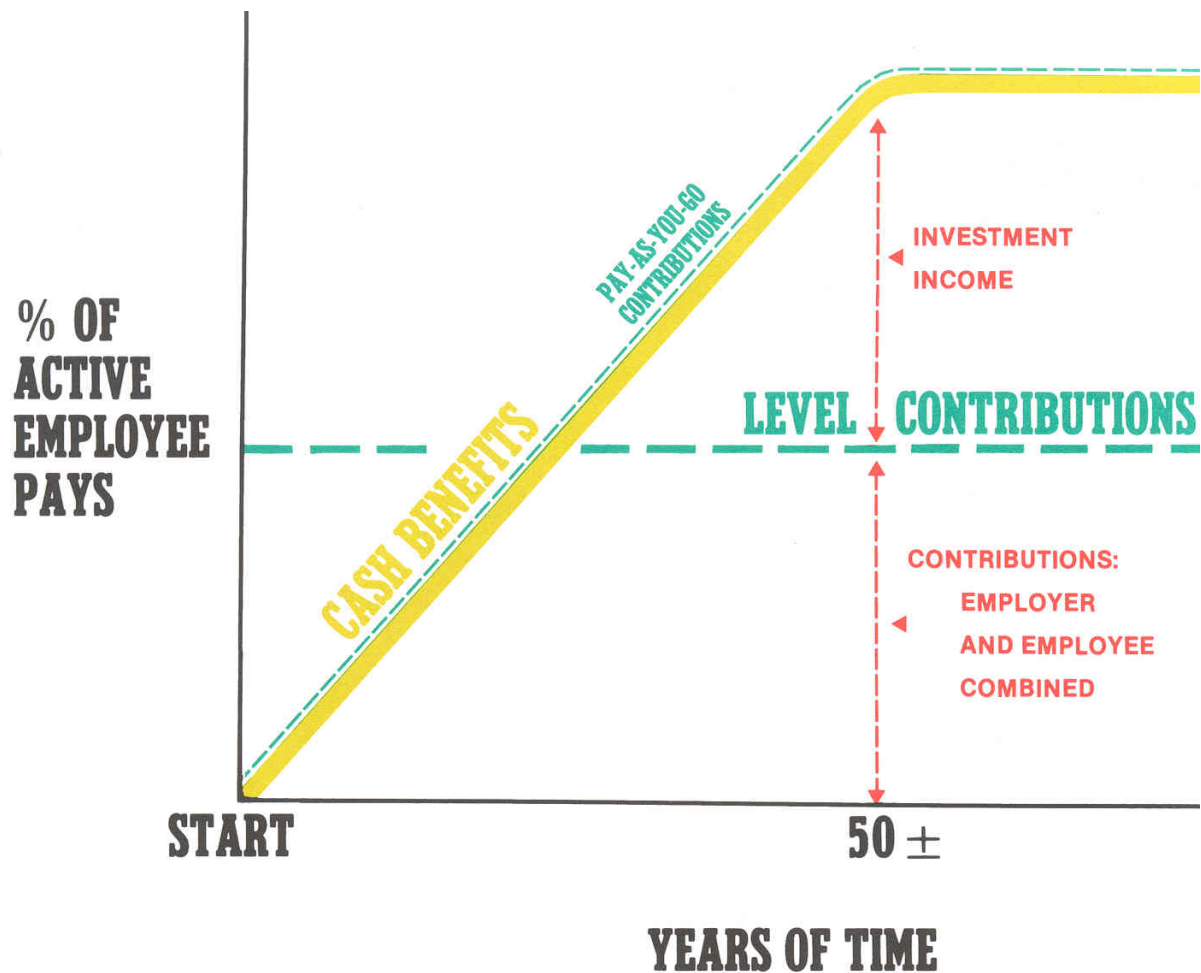

Interest on Unfunded Actuarial Accrued Liabilities (unfunded actuarial accrued liabilities are the difference between: the actuarial accrued liabilities for members' service already rendered; and the actuarial value of assets of ASPRS).

Computing Contributions to Support Fund Benefits. From a given schedule of benefits and from the employee data and asset data provided, the actuary determines the contribution rates to support the benefits, by means of ***an actuarial valuation and a funding method.***

An actuarial valuation has a number of ingredients such as: the rate of investment income which plan assets will earn; the rates of withdrawal of active members who leave covered employment before qualifying for any monthly benefit; the rates of mortality; the rates of disability; the rates of pay increases; and the assumed age or ages at actual retirement.

In an actuarial valuation, assumptions must be made as to what the above rates will be, for the next year and for decades in the future. Only the subsequent actual experience of the plan can indicate the degree of accuracy of the assumptions.

Reconciling Differences Between Assumed Experience and Actual Experience. Once actual experience has occurred and been observed, it will not coincide exactly with assumed experience, regardless of the wisdom of the assumptions or the skill of the actuary and the many calculations made. ASPRS copes with these continually changing differences by having annual actuarial valuations. Each actuarial valuation is a complete recalculation of assumed future experience, taking into account all past differences between assumed and actual experience. The result is ***continuing adjustments in financial position.***

CASH BENEFITS LINE. This relentlessly increasing line is the fundamental reality of retirement plan financing. It happens each time a new benefit is added for future retirements (and happens regardless of the design for contributing for benefits).

LEVEL CONTRIBUTION LINE. Determining the level contribution line requires detailed assumptions concerning a variety of experiences in future decades, including:

Economic Risk Areas

- Rates of investment return
- Rates of pay increase
- Changes in active member group size

Non-Economic Risk Areas

- Ages at actual retirement
- Rates of mortality
- Rates of withdrawal of active members (turnover)
- Rates of disability

THE ACTUARIAL VALUATION PROCESS

The financing diagram on the previous page shows the relationship between the two fundamentally different philosophies of paying for retirement benefits: the method where contributions match cash benefit payments (or barely exceed cash benefit payments, as in the Federal Social Security program) which is thus an *increasing contribution method*; and the *level contribution method* which equalizes contributions between the generations.

The actuarial valuation is the mathematical process by which the level contribution rate is determined, and the flow of activity constituting the valuation may be summarized as follows:

- A. *Census Data*, furnished by plan administrator.
 - Retirees now receiving benefits
 - Former members with vested benefits not yet payable
 - Active members
- B. + *Asset Data* (cash & investments), furnished by the plan administrator.
- C. + *Benefit provisions* that establish eligibility and amounts of payments to members.
- D. + *Assumptions concerning future experience in various risk areas*, which assumptions are established by the Board of Trustees after consulting with the actuary.
- E. + *The funding method* for employer contributions (the long-term, planned pattern for employer contributions).
- F. + *Mathematically combining the assumptions, the funding method, and the data.*
- G. = Determination of:
 - Plan financial position; and/or*
 - New Employer Contribution Rate*

SECTION G
APPENDIX I

STATUTORY EMPLOYER CONTRIBUTIONS ARKANSAS CODE SECTION 24-6-209

24-6-209. Employer's contribution.

(a) The Department of Arkansas State Police, as employer, shall make contributions to the Arkansas State Police Retirement System of twenty-two percent (22%) of active member payroll.

(b) The Director of the Department of Finance and Administration, at the request of the Executive Secretary of the Arkansas State Police Retirement System, is authorized and directed to make annual transfers on each June 30 to the State Police Retirement Fund from the remainder of insurance premium taxes enumerated in A.C.A. 19-6-301(27) before they are transferred to General Revenues enumerated in A.C.A. 19-6-201(19) such amounts of money necessary to amortize the unfunded liabilities over a period not to exceed thirty (30) years for those members not covered by the provisions of A.C.A. 24-6-401 et. seq. These transfers are intended to cover the unfunded accrued actuarial liabilities of the State Police Retirement Fund and shall not be used for the purpose of providing any benefit enhancements for the State Police Retirement System. Members of the Tier One-State Police Retirement System shall not be entitled to any benefit enhancements from these transfers unless funds from sources other than insurance premium taxes are found to provide for the retirement benefit enhancements. The amount of the transfer shall be determined by computing the dollar amount required based on the actuarially determined employer rate in the most recent annual actuarial valuation and subtracting from that amount the statutory contribution amount specified in subsection (a) of this section, the court fees provided by Act 1256 of 1995, and the driver's license renewal fees provided by Act 730 of 1995.

(c) The intent of this section is to provide for funding of any amounts of unfunded accrued actuarial liabilities of the Tier One-State Police Retirement Fund existing on June 30, 1997. These transfers shall be limited in use solely for the purpose of paying those liabilities and nothing more. In the event the transfers under this section exceed eight hundred thousand dollars \$(800,000) per fiscal year, the Executive Secretary of the Arkansas State Police Retirement System shall notify the Joint Committee on Public Retirement and Social Security Programs which shall then review the use of the funds and the benefit provisions of the systems and the actuarial reports on the retirement systems to ensure compliance with the intended purpose of the funds.

October 31, 2013

Ms. Gail H. Stone
Executive Secretary
